Understanding Ebola

Abstract

Ebola Virus Disease or EVD is something that we all might have heard of throughout the world. It was one of the most deadly and dangerous spread of virus that man has ever seen. But did you know that Ebola is not always fatal and it does not even spread through water!

This project aims at understanding Ebola Virus, how it spreads, how it originated and what can we do as educated folks and help others around us by creating awareness and busting common myths regarding it.

Brief: We will take this opportunity to understand the Ebola virus, dig deep into its origination and how it actually became a disease from a virus. We will perform some research; go through articles, publications and public releases. We will create a presentation on the research done and how we can create awareness with proper information. This will help us not only in the future in keeping ourselves healthy but our surroundings healthy too.

Aim:

1) To encourage students to create and have awareness regarding Ebola.
2) Help others understand its symptoms and are proactive in treating it.
3) To encourage students towards field of Micro Biology and understand how research in the area can lead to Historic changes in field of medicine.

Requirements:

1) Basic researching capability through internet and books.
2) Understanding of Microsoft Power Point and word.
